FOREWORD

The Central Basin has been operating under a well-defined ground water basin management plan for several years. One phase of the management plan limits ground water extractions from the basin. This phase is monitored by a Court-appointed Watermaster (California Department of Water Resources) that reports significant ground water activity to the Court and other interested parties.

The Watermaster has prepared this annual report for the parties to the Central Basin Judgment and the Superior Court of Los Angeles County to present a comprehensive review of the water conditions of the Central Basin during the 1968-69 water year. Authorization for this report is contained in the provisions on page 43 of the Judgment rendered by the Superior Court of Los Angeles County in the action: "Central and West Basin Water Replenishment District vs. Charles E. Adams, et al., No. 786,656".

This report contains information on ground water extractions, use of imported water, recharge operations, the administration of the Exchange Pool, and a financial report on Watermaster Service during the 1968-69 water year.

ABSTRACT

A reliable supply of good quality fresh water is a valuable asset to any community. / The Central Basin is a relatively small, but extremely important, ground water basin underlying the southeastern part of the Los Angeles Coastal Plain. Watermaster Service, provided by the California Department of Water Resources, helps to protect and guarantee continued use of ground water by the residents of the area. / The Watermaster has prepared this Central Basin annual report for the Superior Court and the parties to the Judgment. This report contains information on ground water extractions, use of imported water, recharge operation, sea-water barrier operations, and the administration of the Judgment. It also serves as a financial report on the cost of Watermaster Service during the 1968-69 water year.

CHAPTER I. THE CENTRAL BASIN

The Central Basin is a relatively small ground water basin underlying the southeastern part of the Los Angeles Coastal Plain. The sketch on the facing page shows us that the basin is bounded on the south and west by the Newport-Inglewood Uplift, on the north by the hills between the Coastal Plain and the San Gabriel Valley, and on the east by the Orange County line.

Most of the 227 square-mile basin supports an urban-suburban culture. There are 23 incorporated cities claiming a share of the basin's surface area (in this report, the term Central Basin is used for both the ground water basin and the overlying area). Fortunately, a substantial portion of the water needed by the cities can be pumped directly from the basin below.

Obviously, ground water is important to the people who live and work in the Central Basin. Some twenty years ago, after declining water levels triggered sea water intrusion which threatened the ground water supply, swift legal action halted the overdraft and prevented serious damage to the basin. Today, ground water use in the Central Basin is restricted and monitored by a Court-appointed Watermaster. The Watermaster's prime job is to control ground water use and report significant water related events that occur in the Central Basin to the Court and parties.

Watermaster Service

Watermaster Service is administered by the California Department of Water Resources in accordance with Part 4, Division 2, of the California Water Code. Watermaster Service Areas are created by the Department either at the request of water users or by order of the Superior Court. The first Watermaster Service Area was formed on September 1929. Currently there are 19 such areas controlling the surface water diversions in Northern California and 4 in Southern California controlling ground water use.

The primary purpose of the program is to reduce friction and increase rapport among water users of a water supply that is in critical demand. The cost of the program is shared equally by the State and those receiving the service.

Scope of Report

This is the Watermaster's annual report to the Superior Court of Los Angeles County--and to you as a water user or interested observer of water conditions in the Central Basin. The purpose of this report is to describe water supply conditions in the Central Basin during the 1968-69 water year (October 1, 1968 through September 30, 1969).

Detailed comments have been prepared on the following topics: the history of water resources development, ground water replenishment, use of imported and exported water, ground water extractions, sea water intrusion barrier, and fluctuations of the ground water table.

Extensive coverage--in each case a complete chapter--has been devoted to the Watermaster's administration of the Judgment and the cost of Watermaster Service during the 1968-69 water year.

History of Water Resources Development

One hundred years ago, the Los Angeles Coastal Plain was poised on the threshold of a development boom. The key to the future of the Central Basin was water.

The definite shortage of adequate year-round surface water supplies in the Central Basin forced the early development of ground water sources. As early as 1870, water users had tapped the artesian wells and springs east of the Newport-Inglewood Uplift. When the artesian wells ceased to flow, water users were forced to drill small wells for reliable water supplies. These small wells easily produced enough water by pumping to continue the economic growth of the Central Basin Area.

Ground water development spurted dramatically ahead in 1909 with the advent of the deep well turbine pump. Tremendous adaptability and superior operating characteristics of the new pump placed efficient water wells within economic reach of everyone. Reliable water supplies attracted industry and agriculture. Each new business required water. Eventually, the demand for ground water exceeded the natural replenishment of the Central Basin.

The resulting overdraft was clearly indicated by dropping ground water levels and a few small areas of sea water intrusion. The rapidly increasing cost of pumping ground water and an occasional well failure because of dropping water levels were the chief economic reasons for the keen interest in the Central Basin's serious ground water problem.

The deteriorating ground water situation in the Central Basin and the adjoining West Coast Basin prompted interested water users to form the Central Basin Water Association in 1950. A plan to manage the Central Basin's resources began to materialize. The plan would:

1. Provide a supplemental water supply to major producers.
2. Limit ground water extractions from the Central Basin.
3. Create an exchange water pool to provide ground water pumping rights for water users without access to other supplemental water supplies.

Phase I was realized in 1952 when the Central Basin Municipal Water District was formed to distribute water from the Colorado River. The District was annexed to The Metropolitan Water District of Southern California in 1954, and Colorado River water soon was flowing into the Central Basin.

The West Basin Water Association and the Central Basin Water Association were largely responsible for the creation of the Central and West Basin Water Replenishment District in 1959. This special District covers 420 square miles

of the Central and West Coast Basins (Coastal Plain) of Los Angeles County. The District's objective is to replenish and maintain the now depleted ground water basins by purchasing imported water to halt sea water intrusion and replenish the ground water supply. The District financed this program during the 1968-69 year by placing a \$6 tax on each acre-foot of ground water extracted within the District's boundaries.

On January 2, 1962, the Central and West Basin Water Replenishment District filed Case No. 786,656 in the Superior Court, County of Los Angeles, naming more than seven hundred parties. The Plaintiff's objectives: quiet title to rights to the use of ground water, and regulate withdrawals from the Central Basin to protect the water supply from deterioration.

Adverse ground water conditions, and the indefinite period before a final adjudication could be expected, prompted the Central Basin Water Association to draft an interim agreement curtailing extractions from the basin. By September 1962, a proposed interim agreement had been approved by a sufficient number of water producers (producers owning over 75 percent of the Assumed Relative Rights within the basin) to guarantee control over ground water pumping in the basin. On September 28, 1962, the Court signed the "Order Pursuant to Stipulation and Interim Agreement and Petition for Order" and appointed the Department of Water Resources as Watermaster.

In order to avoid the protracted litigation experienced in other watermaster service areas in Los Angeles County, the attorneys representing principal parties held monthly meetings to work toward settlement of the action. A stipulated judgment was drafted by the attorneys at these meetings. Signatures of approval obtained from public utility water companies and other producers represented well over 200,000 acre-feet (75 percent) of the total rights within the basin. This was a prerequisite to filing the stipulated judgment with the Court.

A pretrial was held in March, and on May 17, 1965, the case went to trial before the Honorable Edmund M. Moor. After hearing a week's testimony on engineering, geology, hydrology, safe yield of the basin, and arguments on water right entitlements, the case was continued to August 25, 1965. Shortly thereafter, Judge Moor appointed the California State Department of Water Resources, Watermaster. The final Judgment was signed on October 11, 1965, and became effective on October 1, 1966.

Central and West Basin Water Replenishment District

The Central and West Basin Water Replenishment District (C&WBWRD) is a very active water conservation organization in Los Angeles County. The Replenishment District is responsible for replenishing the underground water supply of both Central and West Coast Basins.

The creation of water replenishment districts is a statutory procedure established by the California Legislature. Division 18 of the California

Water Code describes the duties and obligations of a water replenishment district. Such districts have powers very well suited to solving ground water problems whether the problem be quality or quantity oriented.

The Central and West Basin Water Replenishment District is comprised of a Board of Directors and a small staff to carry out the directives of the Board. The District is actively engaged in several replenishment programs. Several of these programs (i.e. water spreading, barrier operation, and in lieu replenishment) are described later in this report. The District also publishes an annual report of its yearly operations during February or March of each year. If you are interested in learning more about the Water Replenishment District, please contact the District's staff at 7439 East Florence Avenue, Downey, California 90240.

The Watermaster cooperates very closely with the Central and West Basin Water Replenishment District for many reasons:

1. Watermaster Service areas in Central and West Coast Basins closely coincide with Water Replenishment District boundaries.
2. Both the District and the Watermaster are required to record all ground water extractions from the basins.
3. The Replenishment District was the Plaintiff in the Central Basin Water Rights Case (Case No. 786,656, Superior Court, Los Angeles County).
4. Both the District and the Watermaster are concerned with the usefulness of the ground water basins on the Coastal Plain.

Many of the Watermaster's data collection programs are coordinated with the District to prevent wasteful duplication. Hence, your monthly or quarterly water well report is mailed to the District and forwarded to the Watermaster. We would like to thank the District's staff for its close and continuing cooperation with the Watermaster.

Activities of the Watermaster

The Watermaster has now administered the Central Basin Judgment for three years. Always, the focal point of activity has been the annual report to the Superior Court and the parties. The annual report is replete with information gathered throughout the water year; so much information, in fact, that it has become necessary to use electronic data processing machines extensively. It is felt that the speed and accuracy of machines easily offsets the small expense charged for machine rental.

Once a month, every ground water pumper reports his ground water extractions to the Watermaster. This makes possible updating of his water right account (Watermaster Water Production Summary) by computing the amount pumped during

the previous month, the total amount pumped during the current water year, and the amount that can legally be pumped during the remainder of the year. A copy of the updated account is then mailed to the pumpner.

Occasionally, the Summary will indicate a pump and/or water meter malfunction. If electric meter readings are reported along with water meter readings, electric power consumption can be correlated with water production. Erratic or rapidly increasing electric power consumption vs. water production, for instance, may suggest an inefficient pump, system losses, or an inaccurate water meter.

The Watermaster field staff calibrates the water meter on every active water well at least once every two years. Accurate measurement of ground water extractions is absolutely necessary to the success of the Basin's management plan. All available means, including system efficiency tests, are used to confirm water meter test results. Inaccurate meters must be repaired within thirty days. Follow-up tests and initial tests on new wells are scheduled whenever necessary. One copy of each test is furnished to the well owner and another copy is retained by the Watermaster for comparison with future tests.

During the 1968-69 water year, the Watermaster also evaluated historical ground water production records of several parties. All but two of the reviews were routine and resulted in minor uncontested changes in the record.

Mr. Donald R. Plunkett dba Plunkett Water Company, refused to accept the Watermaster's findings of overextraction and on motion of the Watermaster, an order to show cause was obtained from the Court. The matter has been heard by the Court and further details are described in Chapter IV. The other controversy involved Pico County Water District, which requested a ground water extraction adjustment which the Watermaster has declined. The Watermaster's decision in this last matter is explained in Chapter IV of this report, and as so set forth will serve as notice to all parties and the Court of such determination.

The 1968-69 water year witnessed a number of parties being warned for their violation of the Central Basin Judgment either by nonpayment of their share of the budget or for having failed to eliminate their 1967-68 overextractions during the 1968-69 water year. Of those parties warned, a majority paid their delinquent share of the budget or leased sufficient water rights to overcome their overextractions within short notice. However, four parties did not pay their share of the budget within the specified time limit and thus were served with contempt citations and ordered to appear in court. With regard to the parties who overextracted, four were served with contempt citations and ordered to appear in court, whereas the remaining parties chose to pay in advance for their Exchange Pool water, and thus avoided any further litigation. The details of these violations and proceedings are discussed in Chapter IV and Chapter V.

These are the major activities of the Central Basin Watermaster. Of course, there are many others--but most do not require enough time to be considered major activities.

Summary of Operating Conditions

Rainfall during the 1968-69 water year broke all records for the last 30 years; in fact, it was one of the wettest years in the past generation. As a result, the ground water situation in the Central Basin was greatly improved through the increased natural replenishment of the Basin at Whittier Narrows. Rainfall also made its mark on ground water extractions and in imported water, in that it decreased the amount needed to meet all water requirements during the 1968-69 water year. Consequently, total water use was slightly decreased thanks to the above-normal rainfall that fell during the past water year. Table I compares statistics for the last two water years and confirms that operating conditions were changed from the prior water year.

TABLE 1
WATER YEAR SUMMARIES

Item	Water Year	
	1967-68	1968-69
Parties	488	451
Active pumpers	437	389
Active nonparties	38	37
Allowed Pumping Allocation, in acre-feet	217,367	217,367
Watermaster expenses	\$ 45,123.24	\$ 49,570.68
Water expenses per acre-foot pumped	\$.21	\$.23
Rainfall, in inches	12.24	23.61
Spreading operation	154,072 acre-feet	135,879 acre-feet
Extractions	219,945 acre-feet	213,598 acre-feet
Imports	140,362 acre-feet	138,878 acre-feet
Exports	- 37,011 acre-feet	- 37,805 acre-feet
Total Water Use	323,296 acre-feet	314,671 acre-feet

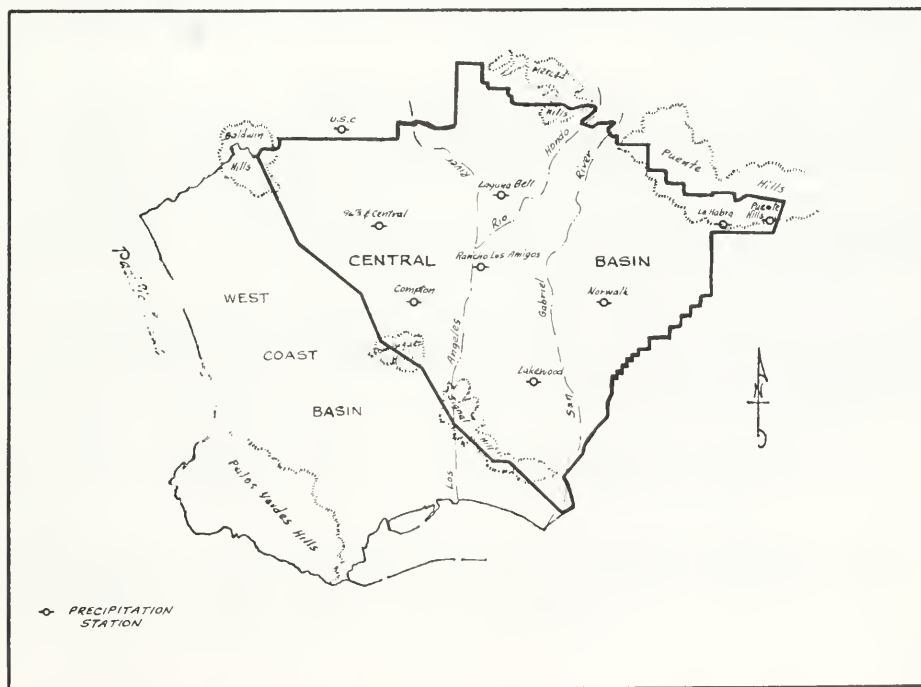

Ninety-nine parties overextracted a total of 2,329 acre-feet in the 1968-69 water year. Sixty-four of these parties overextracted by less than the 10 percent or 2 acre-feet limit established by the Judgment. Twenty-four of the thirty-five remaining parties have purchased sufficient water from the 1969-70 Central Basin Exchange Pool, or have initiated steps to eliminate their overextractions. Specific recommendations for further action against the remaining parties are included in Chapter IV.

CHAPTER II. WATER SUPPLY CONDITIONS

Water from many sources is required to serve the needs of Southern California's thriving urban economy. Water from the Colorado River, water from the Owens River, runoff from the mountains, ground water, reclaimed waste water, and desalination plants along the coast contribute to one of the largest, most reliable water supply systems in the world. Soon, water from Northern California will be available. Even so, current forecasts indicate that additional supplies must be found and developed by 1990 to prevent possible shortages. This chapter explores the sources and uses of current supplies and their effect on water conditions in the Central Basin.

Precipitation

Southern California enjoys a Mediterranean-type climate characterized by hot, dry summers and sparse precipitation during the winter months. The average rainfall on the Central Basin during 1968-69 was 23.61 inches, about 193 percent of the 12.22 inches that fell the year before. The mean seasonal precipitation (base period 1897-1947) varies from 12 inches at Long Beach to 16 inches at Whittier Narrows. The locations of the precipitation stations, used to determine the basin average rainfall are shown below.

Local precipitation in the basin does not influence the ground water supply of the Central Basin to any great degree. A layer of impermeable material lies between the surface and the producing aquifers except in the forebay areas. As a consequence, almost none of the annual rainfall reaches the zones from where it can be pumped back to the surface. This inability of rainfall to replenish the ground water supply contributed to the initial overdraft of the Central Basin. However, the above-normal rainfall (over 200 percent of normal) in the nearby San Gabriel Mountains did induce much runoff which was subsequently captured at the Whittier Narrows to the benefit of the Central Basin.

Ground Water Recharge

Natural replenishment of the basin's ground water supply is limited to inflow through Whittier Narrows (and some underflow) from the San Gabriel Valley. Some of the water that percolates into the forebay areas of Central Basin eventually crosses the Central-West Coast Basin barrier and into the West Coast Basin. For several years now, outflow and extractions have exceeded natural replenishment, thus upsetting the basin's balance.

Today, attempts are being made to re-establish nature's balance. One method of artificial replenishment is water spreading. Water is flooded on areas where it can percolate into the underground aquifers and supplement the natural recharge supply. Large quantities of water can be returned to the ground by spreading water, but the process is limited by the space available for spreading facilities and the ability of the recharge aquifers to transmit water back to the basin.

The large quantities of runoff during 1968-69 resulted in the best year of record for the conservation of local runoff. In most cases, storm runoff must be conserved in the shortest possible time or it will be lost to the ocean. However, last year, the recession flow from the mountains and the dam releases made substantial quantities of water available for spreading, over a period of several months. The end result was that in the spreading operations, the quantity of local runoff exceeded the volume of supplemental water purchased.

The Los Angeles County Flood Control District (LACFCD) operates spreading grounds along the Rio Hondo and San Gabriel Rivers in the Montebello forebay of the Central Basin, see Plate 1 on page 11. The entire spreading operation is summarized in Table 2.

TABLE 2
SPREADING OPERATIONS

Alamitos Barrier Project

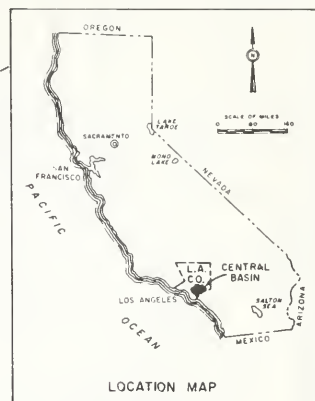

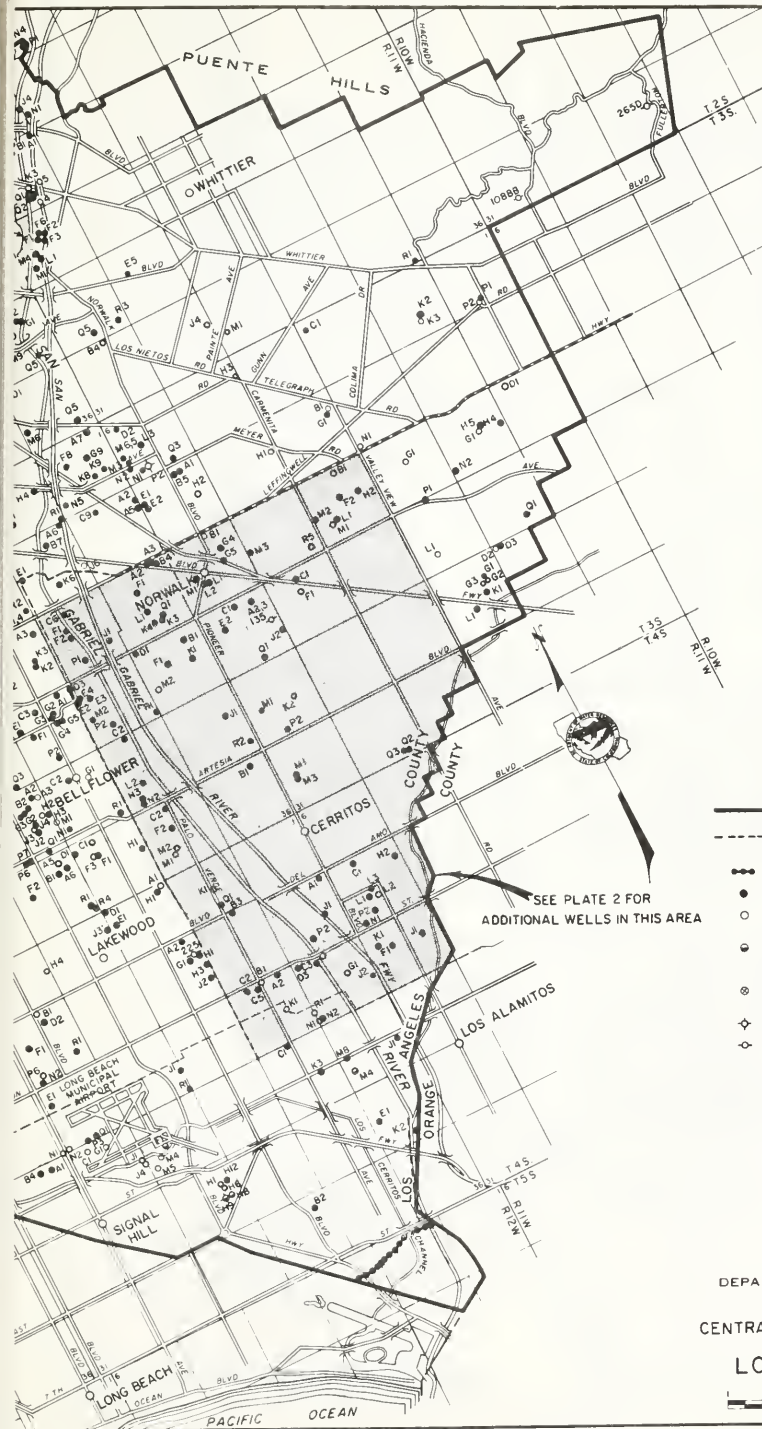

The Alamitos Barrier Project is of great importance to water users in the Central Basin. Its purpose: to prevent sea-water intrusion into the fresh aquifers of the Central Basin.

Sea-water intrusion at the mouth of the San Gabriel River (Alamitos Gap) poses a serious threat to the ground water supply. This area has seven water-bearing zones identified in downward order as the Recent aquifer, C-Zone, B-Zone, A-Zone, I-Zone, Main (Silverado) aquifer, and Lower Zone (Sunnyside) aquifer.

Sea-water intrusion occurs through the Recent Zone, which is very permeable and open to the sea. The C, B, A, and I Zones merge with the Recent Zone and are therefore susceptible to intrusion, which is notable by the varying degrees of salinity occurring in water found in each zone. The saline water intrusion was detected as far as 10,000 feet landward of the Newport-Inglewood fault zone, and if unchecked, could extend into the Silverado and Sunnyside aquifers which are the principal ground water producing zones in the basin.

The Los Angeles County Flood Control District successfully operates a combination saline water extraction trough and fresh water pressure ridge to halt intrusion. The location of the barrier is shown on Plate 1, page 11. Table 3 shows the scope of the Alamitos Gap Barrier Project.

The LACFCD furnished the spreading operation summary and the barrier information tabulated in Table 3. The Watermaster sincerely thanks the LACFCD staff for its excellent cooperation and assistance.

Construction Projects Affecting Water Supply

There are three major construction projects currently in progress that will significantly affect the Central Basin's water supply. These projects are:

1. The California State Water Project. This largest water project ever undertaken will bring water from the Feather River in Northern California to Southern California by 1971. Approximately 90 percent of the facilities needed to convey Northern California water to the South have been completed or are under construction.
2. The Metropolitan Water District's proposed additions to its distribution system. Important parts of the addition are the Second Lower Feeder and the Sepulveda Feeder. Construction of the Sepulveda Feeder pipeline in the San Fernando Valley is 70 percent complete. Construction of 1.38 miles of concrete pipelined tunnel 8 feet in diameter, in the Encino area, is 25 percent complete. On the Lower Feeder, construction of approximately 10 miles of concrete pipeline 78 inches in diameter, located between Alameda Street in Los Angeles County and Palos Verdes Reservoir, is 79 percent complete. Each will carry Northern water into the Central Basin.

3. The City of Los Angeles is currently constructing the second barrel of its Owens River-Mono Basin Aqueduct. The second barrel will actually terminate in the San Fernando Valley but some of the Owens River water eventually crosses the Santa Monica Mountains and moves southward into the Central Basin. As of September 1969, 84 percent of construction was completed and a target date of May 7, 1970, set for operation.

One other project of considerable interest to Central Basin water users is the Los Angeles County Joint Sanitation District's plan to reclaim waste water. Considerable benefit from spreading reclaimed water in the forebay areas of Central Basin may eventually materialize. There is also speculation that reclaimed water may be used to operate the sea water barrier project in the basin.

Water Quality

The largest single problem facing mankind today is pollution. There are many sources of pollution and many types of pollution. Pick up any newspaper or national magazine; the odds are that it will have an article on pollution. Most of the articles deal with air pollution and surface water pollution. However, it is no secret that even underground water is endangered by pollution.

During the water year, a giant step was taken toward the control of ground and surface water pollution contamination. The California Water Quality Improvement Act of 1969 as amended, which became law and will become operative on January 1, 1970, completely revises the State's water pollution and water quality laws. Principal provisions of the amended act constitute Division 7 of the Water Code which division is known as the Porter-Cologne Water Quality Control Act and is one of the most stringent water quality control laws in the nation.

Under the new Act the regional boards will be able to enforce discharge requirements directly without showing the existence of conditions of pollution or nuisance. If a discharger violates requirements of the Boards, and no action is taken to correct deficiencies in discharge, the Board may request enforcement by the Attorney General. Violations of a regional board cease and desist order could result in a maximum fine of \$6,000 for each day of violation.

The battle for good quality water in the Central Basin began many years ago. In fact, it was essentially a water quality problem that prompted the Central Basin litigation. Many of the aquifers underlying the Los Angeles Coastal Plain are separated from each other by impervious material. However, some of the aquifers are hydraulically connected to the ocean, so occasionally one or more adjacent aquifers may become impaired by sea water. If a well is drilled downward through two aquifers, one clean, one polluted, without using proper casing techniques, water can move from the polluted aquifer to the unpolluted one. Obviously, this is an undesirable condition.

The Department of Water Resources has long recognized that such a condition should be prevented. After an extensive investigation the Department published Bulletin No. 74, "Water Well Standards: State of California" in February 1968, and Bulletin No. 74-4, "Water Well Standards - Central,

Hollywood, Santa Monica Basins, Los Angeles County" in August 1968. Bulletin No. 74-4 and its appendixes recommended specific well construction and destruction standards for the Central Basin. Even now, Bulletin No. 74-4 standards are being adopted by local agencies and municipalities in the Central Basin. The Los Angeles Regional Water Quality Control Board No. 4 held hearings on the adoption of these standards in 1969. The Board will disseminate a resolution in January 1970, requesting that standards be adopted by all concerned and that they be so adopted within 6 months of service. The Watermaster urges unanimous adoption in the basin to preserve and protect your valuable water supply.

The Department of Public Health, Bureau of Sanitary Engineering, recently published an "Investigation of Ground Water Quality Problems in the Central Basin of Los Angeles County". If you are interested in the ground water quality of the Central Basin, we recommend that you read this report. It discusses many of the water quality problems that already face water users in the Central Basin, and calls for further investigation by various agencies.

Solid waste disposal has become a major problem in Southern California during the past 25 years. Today, the average Californian is generating five pounds of solid waste every day of the year. It must be disposed of somewhere.

Suitable dumpsites are becoming more difficult to find each year--particularly in urban areas. In recent years, tremendous pressure to use abandoned gravel pits for dumpsites has materialized.

Fortunately for water users, there is an intense, well-organized campaign against such practices throughout the Los Angeles area. The Central and West Basin Water Replenishment District, Central Basin Water Association, and various other agencies have vigorously opposed all applications for permission to operate sanitary landfill programs in the Central Basin. Opposition to the use of gravel pits as dumpsites will undoubtedly continue until fool-proof sealing methods are developed to prevent pollution of ground water by leachates.

In Lieu Replenishment

Four years ago, during the 1965-66 water year, the Central and West Basin Water Replenishment District began a program of in lieu replenishment. The program is authorized by Section 60230 of the California Water Code. In effect, the Replenishment District was given the power to contract with any producer having access to supplemental water to have the producer use supplemental water instead of pumping water from the ground.

The District's program of in lieu replenishment has the following benefits:

1. It may be used to alter pumping patterns within a ground water basin.

2. It may be used to replenish areas of low transmissibility where conventional recharge techniques are ineffective.
3. It may be used to heighten the effect of injecting water to form a sea water barrier by reducing extractions in the vicinity.
4. It may be used to reduce the amount of replenishment water purchased by the District.
5. It may be used to reduce the annual ground water extraction from a ground water basin.

When the District first announced its intention to begin the in lieu replenishment program several Central Basin producers expressed an interest. However, the only producer to actually participate in the program has been the California Water Service Company in the West Coast Basin. The results of the program are summarized below.

TABLE 4
IN LIEU PUMPING

Water Year	: Amount contracted : to in lieu : replenishment program	: Contract price, : dollar per : acre-foot	: Total : payment
1965-66	744.59	\$ 12.33	\$ 9,180.79
1966-67	850.47	14.14	12,027.06
1967-68	850.00	13.36	11,356.00
1968-69	850.00	14.25	12,112.50

Although the in lieu replenishment program is not currently being used in the Central Basin, the Watermaster believes that the program is an effective basin management tool. Significant beneficial effects could result from the program. Anyone interested in learning more about the program should contact the Central and West Basin Water Replenishment District.

Ground Water Levels

Every water well owner in the Central Basin has a keen interest in the location of the ground water surface. After all, the cost of pumping water is largely dependent on the distance the water must be lifted.

Figure 1 shows water level information in the form of selected hydrographs. Location of these key wells are shown in Plate 1, page 11. These particular hydrographs are representative of the several aquifers underlying the basin. In general, they show that the water surface has stabilized and, in some cases, risen slightly because of recharge operations and changing extraction patterns.

Additional water level information is contained in the annual report published by the Central and West Basin Water Replenishment District.

CHAPTER III. WATER USE

During the 1968-69 water year, water purveyors in the Central Basin served more than 314,670 acre-feet of water to their customers.

A rapid population increase in the Central Basin area has caused the water demand to increase substantially each year. Prior to 1961, ground water from the Central Basin served most of the demand. However, the Judgment reduced extractions to about 215,000 acre-feet annually, so imported water rapidly became an important component of the area's water supply.

Figure 2 (page 20) graphically illustrates the annual ground water extraction and total water use from 1952 to the present. Much of the increased imported water demand during the past six years may be directly attributed to the curtailment of ground water extractions.

Figure 3 (page 21) provides another graphical analysis of the monthly relationship between rainfall, ground water extractions, and imported supplies. It is quite obvious that climatic conditions play an important role in water demand. Plates 3, 4, and 5 (pages 23, 25, 27) show the service areas where each party uses its water supply.

Ground Water Extractions

The Central Basin Judgment limits the amount of ground water each party can extract annually from the Basin, or release to the Exchange Pool for pumping by other parties. Recipients of exchange water may pump the amount released to them in addition to their Allowed Pumping Allocation. Table 5 (page 28) is a balance sheet summarizing each party's "water account" by listing its Allowed Pumping Allocation (see Appendix A for any changes), carryover, exchange pool transaction, and ground water extraction during the 1968-69 water year.

In order to provide flexibility in the control of ground water extractions, the Judgment contains various provisions allowing the parties to carry over into the succeeding water year a portion of their unused water right and in some cases to overextract. This flexibility was necessary to meet unforeseen emergencies in water demands.

First of all, one provision allows parties to carry over from one water year to another any unused Allowed Pumping Allocation up to an amount not to exceed ten percent of that party's Allowed Pumping Allocation or 10.00 acre-feet, whichever is greater. There is also a provision that allows, under certain circumstances, parties to overextract, i.e., if in good faith they underestimate their water requirements for that year. However, the allowable extraction in this case is limited to ten percent of the party's Allowed Pumping Allocation or two acre-feet, whichever is greater. In addition, any unused exchange pool water can be carried over into the following water year. Chapter 4 contains additional information on this provision.

a/ See Appendix A and Table 11 for information concerning leases, revised water entitlements, or prior ownership.

b/ Includes Exchange Pool water carryover.

c/ Production reported monthly as well as quarterly in Appendix B. See Tables B-1 and B-2.

d/ Extractions by predecessors in interest.

e/ Exchange Pool water purchased or sold by predecessors in interest.

f/ The figure in last year's report has been updated and corrected.

g/ Includes extractions by all predecessors in interest.

h/ Includes Exchange Pool water purchased or sold by predecessors in interest.

i/ Juan De Cordova well used by Associated Southern Investment Company, Art Edwards, and Juan De Cordova.

j/ Excludes 0.13 acre-feet which was chargeable to City of Cerritos as successor in interest to a portion of L. & M. Dunn.

k/ Includes extractions by predecessors in interest and Lakewood Golf Course well by Los Angeles County Parks and Recreation Department.

l/ Exchange Pool water is purchased to offset extraction at Lakewood Golf Course well.

m/ Los Angeles County has an inter-agency exchange pool whereby all water right balances are combined and divided between the agencies in proportion to their needs or water right.

n/ Ray Mitchell is a nonparty and a tenant of Charles E. Adams, Corporation of the Presiding Bishop of the Church of Jesus Christ of Latter Day Saints, P. and V. Ruggieri, W. J. Schworer, and Visser Brothers Properties.

o/ Frank J. Rose and John Tabita, et al. share same well on a fifty-fifty basis.

The metered ground water production from each active well in the basin is listed by party in Appendix B, Tables B-1 (page 104) and B-2 (page 121). This tabulation shows the total ground water production as reported by each party. Table B-1 lists parties that report on a monthly basis, whereas Table B-2 lists parties that report on a quarterly basis. The location of the wells where ground water was extracted is shown on Plates 1 and 2, pages 11 and 12.

Extractions by Nonparties

In order to keep the parties and the Court apprised of all ground water extractions within the Central Basin, the Watermaster collected information on nonparty ground water extractions. The nonparties were not named in the Central Basin Judgment and as such are not under the jurisdiction of the Watermaster.

The ground water extractions, as reported to the Central and West Basin Water Replenishment District, are shown on Table 6.

Water Wells in the Central Basin

Each water well in the Central Basin is assigned a state well number to simplify locating the well. A state well numbering system was adopted several years ago which utilized the United States Public Land Survey System. A graphical illustration of the system in the Central Basin is shown below.

Each state well number consists of a township, range, and section number; a letter to indicate the 40-acre plot where the well is located; a number to identify the particular well in a section; and the letter "S" indicating that the well location is referenced to the San Bernardino Base and Meridian.

For instance, state well number 4S/13W-33R01S would be the first well assigned a number in Township 4 South, Range 13 West, Section 33, and in the 40-acre Tract "R". All wells in Los Angeles are referenced to the San Bernardino Base and Meridian, so the letter "S" is sometimes dropped in this report.

As a matter of course, the Watermaster locates all new wells by surveying them in and assigning new state well numbers. If a well is suspected of being abandoned or destroyed, the Watermaster tags the well, requesting that the owner inform the Watermaster of his intentions. In this manner, the owner may be informed of the proper methods of destroying a well.

Imported and Exported Supplies

Earlier it was noted that large quantities of water are imported to the Central Basin from other sources. Water from the Colorado River arrives through the facilities of The Metropolitan Water District of Southern California for distribution by the Cities of Long Beach, Los Angeles, Compton, the West Basin Municipal Water District, and the Central Basin Municipal Water District. The City of Los Angeles also imports water from the Owens River-Mono Basin in east Central California. In addition, the City of Inglewood imports ground water from the West Coast Basin and the City of Whittier and the Suburban Water Company import ground water from the San Gabriel Basin.

Exports from the Central Basin are very small when compared to imports. The City of Long Beach exports blended ground water and Colorado River water to the West Coast Basin, while the California-American Water Company, Dominguez Water Company, and the City of Signal Hill export ground water to the West Coast Basin. All Central Basin imports and exports are listed in Table 7.

a/ Colorado River water.

b/ Colorado River water and West Coast Basin ground water.

c/ Colorado River water and Owens River-Mono Basin water.

d/ Excludes imports by City of Whittier - 8,775 acre-feet (1967-68); 6,890 acre-feet (1968-69) and Suburban Water Systems - 12,667 acre-feet (1967-68); 11,728 acre-feet (1968-69).

e/ Central Basin ground water.

f/ Colorado River water and Central Basin ground water.

CHAPTER IV. ADMINISTRATION OF THE JUDGMENT

The Central Basin Judgment was a logical step toward preserving the usefulness of a valuable natural resource. It provided a flexible tool to limit extractions and still allow beneficial use of the ground water supply. However, the limit on ground water extractions imposed by the Judgment forced the parties to look for other supplies. Fortunately, other sources of water were available. If they had not been, the rapidly increasing demand for water might have literally bankrupted the basin before other basin management techniques could have been developed.

Exchange Pool

The Court and parties foresaw that adjudicating the water rights in the Central Basin and limiting the total extraction would not be satisfactory to all parties. Part III, Subpart C of the Judgment authorized a water Exchange Pool to provide additional water rights for members without a supplementary supply.

Each year, during October and November, the Watermaster opens the Exchange Pool to permit inter-member water right leases in accordance with the Judgment. Membership in the Exchange Pool is voluntary, and any party can join by filing a "Notice of Intention to be Bound by the Exchange Pool" (or a completed Exchange Pool form) with the Watermaster and the Court. Tables 8 (page 38) and 9 (page 40) summarize the 1968-69 water year Exchange Pool transactions.

On or about September 30 of each year, the Watermaster mails an Exchange Pool form to each member, requesting that he complete and return the form to the Watermaster by November 10. In completing the form the member must first estimate his water requirement and supply for the appropriate water year. If the member has a connection to the Metropolitan Water District or the Central Basin Municipal Water District, and his total supply (including Colorado River water) exceeds his estimated requirement, the member must offer ("Required Offer") to release a portion of his pumping right to the Pool. The Required Offer should be 20 percent of the member's Allowed Pumping Allocation. However, the Required Offer plus the estimated requirement absolutely cannot exceed the party's total supply. The Required Offer is limited to an amount which can be replaced with Colorado River water.

There is another type of offer called the "Voluntary Offer". Any member may voluntarily offer pumping rights to the Exchange Pool. The only requirement: the member's supply must exceed his estimated requirement and only the difference may be offered. However, the Watermaster must first allocate all the "Required Offers" before using the "Voluntary Offers" in filling "Category (a) Requests". A "Category (a) Request" is defined as that quantity requested by a member which quantity is not in excess of 150 percent of its Allowed Pumping Allocation or 100 acre-feet, whichever is greater. "Category (b) Requests" are those requests which exceed the 150 percent or 100 acre-foot limitation. Whenever there are insufficient Required Offers to meet all Category (a) Requests, Voluntary Offers may be used in lieu of Required Offers. Category (b) Requests are filled exclusively by Voluntary Offers.

Mel, Incorporated	83	2,988
Ferricone, Sam and Louis Romoff	94	3,384
TOTALS	190	\$ 6,840

Experience has been such that there have always been sufficient Required Offers to meet all the Category (a) Requests; as a result, no Voluntary Offers have been used to fill Category (a) Requests. It is doubtful whether Voluntary Offers will ever be used to meet Category (a) Requests. Consequently, very few Voluntary Offers are used in the Central Basin Exchange Pool. The only instances where Voluntary Offers are utilized are in those cases where requests exceed the 150 percent or 100 acre-foot limitation. During the 1968-69 water year, there were three members to the Exchange Pool whose requests met these criteria.

The price a member may charge for either type offer is fixed by Part III, Subpart C, Paragraph 10 of the Judgment. The price is based primarily on the cost of water from the Central Basin Municipal Water District and the pumping tax set by the Central and West Basin Water Replenishment District. Since the price of water set by Central Basin Municipal Water District and Central and West Basin Water Replenishment District vary from year to year, the cost

of Exchange Pool water cannot be accurately predicted. Undoubtedly the cost will continue to rise in future years. The cost computation for the 1968-69 Exchange Pool is shown below.

Formula for Computing Price of
1968-69 Central Basin Exchange Pool Water

(1) Cost of water from Central Basin Municipal Water District	\$47
(2) Plus	<u>2</u>
	\$49

Less:

(3) Average incremental cost of pumping	\$ 7
(4) Replenishment assessment	<u>6</u>
	-\$13

Price per acre-foot for subscriptions utilized	\$36
--	------

If a member's estimated requirement exceeds his total supply (including leases), he may request the difference from the Exchange Pool. The cost per acre-foot is the same as the price determined by the above formula and described in the preceding paragraph. Parties buying Exchange Pool water shall, on or prior to December 31 of each water year, pay to the Watermaster one quarter (1/4) of the total cost for the Exchange Pool water that he ordered. On or prior to the last day of the next three succeeding months, he is required in each instance to pay an additional one quarter (1/4). The Exchange Pool transactions shown in this report were for the 1968-69 water year and should not be confused with the 1969-70 Exchange Pool transactions which were completed on November 10, 1969.

Exchange Pool Carryover

Chapter II pointed out some of the variables that affect water use. Again, we should like to emphasize the impact of climate, culture, business conditions and recreational demand on water use--and the difficulty of estimating future water requirements. Hence, the inclusion of an Exchange Pool carryover clause in the Central Basin Judgment.

The Central Basin Exchange Pool provides additional pumping rights to parties at a relatively high price. The authors of the Judgment therefore believed that the parties should be allowed to pump their entire exchange water purchase regardless of the provisions limiting carryover of water rights. Therefore, a specific exchange water carryover provision was drafted and included in the Judgment.

The clause specifically allows a party that purchased exchange water to carryover the unpumped portion of its allowable extraction until all of the exchange water is pumped. Table 10 lists each party that carried exchange water into the 1968-69 water year, and the amount of water carried forward. Table 10 also shows the amount charged to each party for the privilege of carrying over exchange water. The charge is authorized by the Judgment and is based on the difference in the prices of exchange pool water between the year the water was purchased and the year the water was carried forward to. Table 5 (page 28) also shows those parties having a carryover of exchange water from the 1968-69 to 1969-70 water year.

Transfers of Allowed Pumping Allocations

The Central Basin Exchange Pool is not the only method of obtaining additional pumping rights. Each water year, there are a number of water right lease and sale transactions between parties. Table 11 lists all leases, sales, parties, and amounts involved. Appendix A also records all sales of water rights between parties and shows the current ownership of Allowed Pumping Allocations by each of the parties as of September 30, 1969.

Please note the suggested sample copies of water right lease and sale agreements which follow Table 11 (page 54). They have been prepared because most of the documents received by the Watermaster are lengthy and unnecessarily complex. The Watermaster recommends that all documents be prepared, wherever possible, on a 8-1/2 x 11-inch sheet of paper and that any necessary additions to the recommended agreement be typed on another page and attached. The sample documents need not be used if other forms are preferable, but they are sufficient for most purposes and have the advantages of brevity and clarity.

In order that a water lease or sale agreement be in force during the water year, it must have been signed before or during the water year in question. In addition, the lease or sale document should be filed early with the Watermaster. Failure to submit a lease document or sale document by September 30 of the water year in question may be considered as evidence that such an agreement was never consummated during such water year.

Whenever a water right owner sells his property on which the water right was developed, e.g., farm, ranch, dairy, etc., the Watermaster assumes that the water right passes on to the new owner unless specifically reserved in the Grant Deed. In many cases, the Watermaster is never notified that the property has been sold and that a new owner is in existence. It is requested that the Watermaster be notified, as soon as possible, of any sale of property or water right so that the proper document or Grant Deed may be submitted to the Watermaster. Once the Watermaster verifies that the property has been sold and that the water right has not been reserved, the records will be updated to show the new owner of the water right.

Should any questions arise regarding the sale or lease of water rights, please feel free to call the Watermaster for information.

WATER RIGHT LICENSE AND AGREEMENT

JOHN DOE hereby grants to BILL SMITH: a license to extract _____ acre-feet of licensor's Allowed Pumping Allocation allocated to licensor (or predecessors in interest) under and pursuant to Judgment dated October 11, 1965 and entered in Los Angeles Superior Court Case No. 786,656 entitled "Central and West Basin Water Replenishment District vs. Charles E. Adams, et al." during the period commencing October 1, 19__ and continuing to and including September 30, 19__.

Said License is granted, subject to the following conditions:

- (1) Licensee shall exercise said right and extract the same on behalf of JOHN DOE during the period above specified and put the same to beneficial use and licensee shall not by the exercise hereunder of said right acquire any right to extract water independent of the rights of licensor.
- (2) Licensee shall pay assessments levied on the pumping of said ground waters by the Central and West Basin Water Replenishment District.
- (3) Licensee shall notify the District and the Watermaster that said pumping was done pursuant to this license and provide the Watermaster with a copy of the document.
- (4) Licensee shall note, in any recording of water production for the period of agreement, that said pumping was done pursuant to this license.

JOHN DOE warrants that he has _____ acre-feet of Allowed Pumping Allocation and that he has not pumped and will not pump or permit or license any other person to pump any part of said _____ acre-feet during period of October 1, 19__ through September 30, 19__.

Overextractions

Each year some parties extract more ground water from the Central Basin than they are entitled to. The overextractions are usually small, within the tolerance set by the Judgment. Each party may overextract by 2 acre-feet or 10 percent of its Allowed Pumping Allocation, whichever is greater, on the premise that the overextraction will be eliminated during the following water year. Any overextractions above this limit must have prior approval by the Watermaster. Most overextractions are the result of an unexpected increase in water demand so it would be unreasonable not to allow some deviation from the limits and guidelines of the Judgment. Table 12 summarizes all overextractions during the 1968-69 water year.

WITH RESPECT TO EACH PARTY LISTED ON TABLE 12 CONTAINED IN THIS PORTION OF THE REPORT ON "OVEREXTRACTIONS", THE AMOUNT SHOWN IN COLUMN 6 CONSTITUTES THE QUANTITY OF WATER IN ACRE-FEET BY WHICH THAT PARTY HAS OVEREXTRACTED GROUND WATER FROM THE CENTRAL BASIN IN EXCESS OF THE QUANTITIES PERMITTED TO IT UNDER AND PURSUANT TO THE JUDGMENT IN THE CENTRAL AND WEST BASIN WATER REPLENISHMENT DISTRICT, PLAINTIFF, VS. CHARLES ADAMS, ET AL. DEFENDANT NO. 786.656, LOS ANGELES SUPERIOR COURT. EACH SUCH PARTY'S ALLOWED PUMPING ALLOCATION FOR THE WATER YEAR 1969-1970, AS SHOWN IN APPENDIX A OF THIS REPORT, IS REDUCED BY SAID QUANTITIES SHOWN IN COLUMN 6, PURSUANT TO THE PROVISIONS OF PART III, SUBPART B, PARAGRAPH 3 OF THE JUDGMENT, EXCEPT INsofar AS THAT PARTY HAS ORDERED AND HAS BEEN ALLOCATED EXCHANGE POOL WATER FOR THE WATER YEAR 1969-70. THE FOREGOING STATEMENTS CONTAINED IN THIS PARAGRAPH CONSTITUTE A DETERMINATION AND FINDING BY THE WATERMASTER PURSUANT TO THE PROVISIONS OF PART II OF SAID JUDGMENT. NOTWITHSTANDING THE FOREGOING, THE SAID STATEMENT AND THE DATA SHOWN ON SAID TABLE, CONSTITUTE AFFIRMATIONS OF PREVIOUS ORDERS AND DETERMINATIONS OF THE WATERMASTER WITH RESPECT TO THE FOLLOWING NAMED PARTIES: MARY CORDEIRO AND FIRST WESTERN BANK AND TRUST COMPANY, ED AND SJANA HAAKMA, JACOB AND BONNIE KIMM, RALPH AND CAROLINE OOSTEN, DONALD R. PLUNKETT, POMERING TRACT WATER ASSOCIATION, AND HARM AND PEARL WIERSMA.

A number of parties overextracted or were on the verge of overextracting early in the 1968-69 water year. As a result, the Central and West Basin Water Replenishment District and the Watermaster advised many of these parties of the consequences of overpumping. Footnotes in Table 12 indicate the parties that received letters and subsequently overextracted. In the majority of cases, the parties that were notified purchased sufficient water from the 1969-70 Exchange Pool to eliminate the overextractions. The Watermaster recommends that no action be taken against any of these parties. The Watermaster further recommends that no action be brought against those parties that requested permission of the Watermaster, and the Watermaster approved their overextractions during the 1968-69 water year. In most cases, these parties have submitted a pledge to buy or lease sufficient water rights to eliminate their overextractions. In some cases, they have informed the Watermaster that their water needs will be decreased during the coming water year due to reduction in their plant or farm operations.

The seven parties listed above are in definite violation of the Central Basin Judgment by virtue of having overextracted during 1968-69. These parties did not seek prior approval of the Watermaster, even after having

a/ Includes water right leases.

b/ Computed as 2 acre-feet or 10 percent of Allowed Pumping Allocation /Column (1)/, whichever is larger.

c/ Advised by Watermaster of possible overextraction and/or advised by Central and West Basin Water Replenishment District of overextraction.

d/ This party did not request permission to overextract and is in violation of the Judgment. However, it has taken steps to eliminate its overextraction.

e/ No permission to overextract requested of or approved by Watermaster. Party is in violation of Judgment.

f/ Permission to overextract by this amount in 1967-68 requested by this party and approval was given by Watermaster.

g/ Permission to overextract was requested by this party and approval was granted by Watermaster.

h/ No permission to overextract by this amount in 1967-68 requested of or approved by Watermaster. Party was in violation of Judgment.

i/ Los Angeles County has an inter-agency exchange pool whereby all water right balances are combined and divided between the agencies in proportion to their need or water right. Thus the overextraction has been reduced in this case.

been notified of their possible overextractions. As of the date of this report, no positive steps have been initiated by any of the above named parties in order to resolve their overextractions. In addition, Bank of America National Trust and Savings Association, Mary Borges, John and Nell Vanderham, and Pete and Mary Vanderham violated the Judgment in a similar fashion. However, the Watermaster did not notify these four parties of their possible overextraction. Nevertheless, these parties are likewise in violation of the Judgment.

The Watermaster feels that, with the exception of the above named parties, most parties are seriously attempting to resolve their water problems. Every possible solution should be attempted before court action is initiated.

Findings and Determinations by Watermaster

From time to time the Watermaster is required to evaluate historical ground water production records of parties at the request of the parties or at the Watermaster's discretion. In some instances, the evaluation and findings result in minor uncontested changes in the records to the benefit of the party or visa versa. All but two of the reviews that were conducted in the 1968-69 water year resulted in favorable conclusions. The two findings and determinations that were contested involved Donald R. Plunkett dba, Plunkett Water Company, and the Pico County Water District.

On or about October 29, 1968, the Watermaster advised Mr. Plunkett of the Watermaster's final determination of 1967-68 ground water production. On or about November 6, 1968, Mr. Plunkett by letter rejected such final determination. An attempt was made before the Executive Committee of the Central and West Basin Water Replenishment District to resolve the controversy, but the effort was unsuccessful. Thereafter, information received by the Watermaster from Mr. Plunkett indicated continued overproduction in violation of the Judgment; and Mr. Plunkett was notified of such violation. The matter still not having been resolved, on or about June 12, 1969, an order to show cause why Mr. Plunkett should not be adjudged in contempt, was obtained from the court. Thereafter the matter was heard by the court on or about October 20, 1969. The court requested submission of written arguments within 20 days, after which the matter would be taken under submission. To date, a decision has not been rendered.

On April 1, 1969, the Pico County Water District submitted a claim for adjustment of the District's 1967-68 ground water extraction. The claim was based on the fact that there had been an unintentional and inadvertent overextraction caused by overproduction through a new pump, which had not been immediately detected because the overflow had been carried off from the District's storage tanks by pipes which the District claimed had returned the water to the Central Groundwater Basin and that the other Central Basin users had suffered no detriment.

The Watermaster has determined that in the absence of positive and uncontrovertible evidence that other producers suffered no detriment, and since the water was actually extracted from the basin, the Watermaster has no alternative but to deny the District's claim; and the claim is accordingly hereby denied.

CHAPTER V. ADMINISTRATIVE COSTS

The Central Basin Area was established as a "Watermaster Service Area" in accordance with Part 4, Division 2, of the Water Code of the State of California. Therefore, as provided under Section 4201, the cost of administering the service area and the distribution of water therein is payable one-half by the State and one-half by the parties.

Cost of Watermaster Service for 1968-69

The Judgment requires that the Watermaster prepare and mail a copy of the tentative budget to each of the parties at least 60 days before the beginning of each water year. If no objections are received within 15 days after service of the tentative budget, it becomes the final budget.

The tentative budget submitted to the parties on July 31, 1968, is presented in Table 13. There were no objections and it was adopted as the final budget on August 15, 1968.

TABLE 13

APPROVED BUDGET FOR 1968-69

Salaries and wages	\$14,309	
Operating expenses	<u>19,961</u>	
 TOTAL BUDGET		 \$64,270
 Less estimated funds on hand		
October 1, 1968		<u>0</u>
 Billing amount necessary for		
water year October 1, 1968-		
September 30, 1969		\$64,270
 One-half payable by State		 \$32,135
 One-half payable by parties		
to Judgment		\$32,135

The administrative cost chargeable to the parties was apportioned among the parties as directed by the Judgment. The Judgment provides that if the portion of the final budget payable by the parties is equal to, or less than \$5 per party, the cost shall be equally apportioned among the parties. However, if the parties' share of the budget is greater than \$5 per party, each party will be assessed a minimum of \$5 and the total amount so collected will be deducted from the parties' share of the budget. The remaining balance to be collected is then assessed among the parties in proportion to their Allowed Pumping Allocation which is in excess of 65 acre-feet.

Apportionments of parties' share of the budget for the water year 1968-69 are set forth in Table 14. A five percent penalty is assessed if payments become delinquent. In this respect, 74 parties were penalized as their payments were not made within the allowable 30 days after service of the statement of the amount due. Assessments totaling \$19.73 were collected for delayed payments.

There were no outstanding payments on the 1968-69 budget by September 30, 1969. However, there still existed six outstanding payments as of May 7, 1969, at which time the attorneys for the Central and West Basin Water Replenishment District sent a warning notice to all six parties involved. Those delinquent parties receiving notices were: Peter Bothof; Mary Cordero and First Western Bank Trust; Arthur D. and James A. Ramsey; Lucille C. Pimental; Patricia Davis Rogers; and Henry and Mary Van Ruiten. These parties were warned that they might be cited for contempt if they failed to pay their share of the budget by May 15, 1969. On June 12, orders to show cause in re contempt were obtained against Mary Cordero; Arthur D. and James A. Ramsey; Henry and Mary Van Ruiten; and Patricia L. Davis Rogers. After having been served with the orders which were signed by Judge Joseph A. Wapner, the parties so named paid their share of the budget prior to the court hearing, and as a result did not appear in Court. The Judge warned that further infractions of the rules of the Central Basin Judgment would be dealt with through stiffer fines and the parties involved would be held accountable for all legal fees.

Chapter III presents information on Exchange Pool water carryover. This provision directs the Watermaster to bill and collect from those parties having a carryover of Exchange Pool water the difference in price per acre-foot (\$3.11) for exchange water when the price in the succeeding water year (\$36.00) exceeds the price of the previous year (\$32.89). A total of \$1,504.18 was collected for exchange water carried over from the 1967-68 water year to the 1968-69 water year. See Table 10 (page 45) for a detailed breakdown. These additional payments are considered miscellaneous income to the Watermaster and are applied towards that share of the Watermaster's budget to be paid by the parties.

In addition to the above-mentioned receipts, \$388.26 was collected for delayed payments in the operation of the Exchange Pool. The penalties were assessed in accordance with Exchange Pool procedures and the additional miscellaneous income thus collected was applied towards the parties' share of the budget.

Income and expenditures for watermaster service during the 1968-69 water year are shown in Table 15 (page 66). Any credit or debit balance is carried forward into the succeeding water year.

Sold to Fikse, Alfred Jr. and Aggie	– 10	
		0
Virginia Country Club of Long Beach		272
Visser, Louis		7
Visser Brothers		
Successor to: Gonsalves, Joe A. and Virginia	10	
Haagsma, Gerrit and Mary	8	
Sold to Visser Brothers Properties	– 8	
		10
Visser Brothers Properties		
Successor in part to Visser Brothers		8
Successor to Haagsma, Gerrit and Mary		31
Vista Hill Psychiatric Foundation		
Von's Grocery Stores		
Successor to Dria Company	6	
Sold to Lakewood, City of	– 6	
		0
Walnut Irrigation District	123	
Sold to Pico Rivera, City of	– 123	
		0
Walnut Park Mutual Water Company		996
Warmington Construction Company		
Successor to Bouman, Sam	6	
Dedicated to Cerritos, City of	– 6	
Successor to Holtman, Henry H. and Apollonia	10	
Sold to Casa Grande	– 10	
		0
Warmington, E. G., et al		
Successor to Burson, Miles A. and Rose	6	
Sold to Casa Grande	– 6	
		0
Watt, R. A., Company		
Successor to: Bos, Gerrit and Margaret	70	
Gordon, Fern Ethyl	14	
Tarr and McComb Oil Company	69	
Dedicated to Cerritos, City of	– 83	
		0
Webster, C. D.	1	
Sold to De Cordova, Juan	– 1	
		0
Weiss, Morris		6*
Successor in part to Clark, Russell B.		

ALLOWED PUMPING ALLOCATION – SEPTEMBER 1969
(continued)

<u>Party</u>		<u>Allowed Pumping Allocation, in acre-feet per year</u>
Weiss, Morris and Bessie	16	
Sold to Murphy, Elmo D. and Evelene B.	<u>– 16</u>	0
Western Investment Ltd. Company		
Successor to Vander Dussen, M. and Aletta C.	10	
Sold to Somerset Land Company	<u>– 10</u>	0
West Gateway Mutual Water Company	84	
Sold to San Gabriel Valley Water Company	<u>– 84</u>	0
West Pac, Ltd.		
Successor to Moore, Alexander and Betty L.	13	
Dedicated to Cerritos, City of	<u>– 13</u>	0
Westra, Henry and Hilda		32
Whittier, City of		621
Whittier Union High School District		100
Wier, Arend Z.		
(Now known as Zwier, Arend		
Wiersema, Harm and Pearl		13
Wiersma, William and Elbra		6
Williams, John J.		
Successor to: Becklund, Iver F.	1	
Becklund, Margaret E.	1	
Sold to Tabita, John and Erma and Raymond and Kwany II	<u>– 2</u>	0
Williams, Ralph P. and Mary	11	
Sold to Los Angeles County Sanitation District No. 2	<u>– 11</u>	0
Wilshire Oil Company of California	1,436	
Sold to Gulf Oil Corporation	<u>– 1,436</u>	0
Wilson, Melvin L. and Marie	1	
Sold to Darry Valley Associates	<u>– 1</u>	0
Winslow, D. P. and Dorothy C.		
(Now known as Susan C. Winslow)		
Winslow, Susan C.		12
(Formerly known as Winslow, D. P. and Dorothy C.)		
Winters, Helene K.	1	
Dedicated to Cerritos, City of	<u>– 1</u>	0
Wiseman, Fred E. and Grayce Anna	2	
Sold to Arden-Mayfair, Incorporated	<u>– 2</u>	0
Wolfsberger, Helen and Christine Joseph		2*

ALLOWED PUMPING ALLOCATION - SEPTEMBER 1969
(continued)

<u>Party</u>		<u>Allowed Pumping Allocation, in acre-feet per year</u>
Woo, Cho Shee	16	
Sold to Vertex Development Company	- 16	
		0
Wybenga, Gerrit and Rena	8	
Sold to Albers, J. N. and Nellie	- 8	
		0
Yamamoto, George and Alice		14*
Yokota, Paul and Miyo		4*
Young, Maxine		3
Zandvliet, A.	6	
Sold to Presley Development Company	- 6	
		0
Zeilstra, Arnold and Nellie		5
Zivelonghi, George and Antonio		97
Zuidervaart, Dick and Janna		1*
Zwier, Arend		
Formerly known as Wier, Arend Z.	11	
Sold to Glenn-Hagen Development Company	- 11	
		0
Zylstra, John and Leonard	18	
Sold to Cerritos, City of	- 10
